

PERCENTILE

SSC Percentage (ssc_p) Distribution Analysis

Q1 → Q2 (25%–50%):

SSC scores increase sharply from 60.6 to 67, showing that a large number of candidates move quickly from lower to average performance levels.

Q2 → Q3 (50%–75%):

Scores rise from 67 to 75.7, indicating a strong improvement among above-average performers and a wide spread in this range.

Q3 → 99% (75%–99%):

SSC scores grow more moderately from 75.7 to 87, suggesting fewer candidates but steady improvement among top performers.

99% → Q4 (99%–100%):

The increase is minimal from 87 to 89.4, showing that extreme high values are closely clustered with very little variation.

HSC Percentage (hsc_p) Distribution Analysis

Q1 → Q2 (25%–50%):

SSC scores increase sharply from 60.9 to 65, showing that a large number of candidates move quickly from lower to average performance levels.

Q2 → Q3 (50%–75%):

Scores rise from 65 to 73, indicating a strong improvement among above-average performers and a wide spread in this range.

Q3 → 99% (75%–99%):

SSC scores grow more moderately from 73 to 91.86, suggesting fewer candidates but steady improvement among top performers.

99% → Q4 (99%–100%):

The increase is minimal from 91.86 to 97.7, showing that extreme high values are closely clustered with very little variation.

DEGREE Percentage (degree_p) Distribution Analysis**Q1 → Q2 (25%–50%):**

SSC scores increase sharply from 61 to 66, showing that a large number of candidates move quickly from lower to average performance levels.

Q2 → Q3 (50%–75%):

Scores rise from 66 to 72, indicating a strong improvement among above-average performers and a wide spread in this range.

Q3 → 99% (75%–99%):

SSC scores grow more moderately from 72 to 83.86, suggesting fewer candidates but steady improvement among top performers.

99% → Q4 (99%–100%):

The increase is minimal from 83.86 to 91, showing that extreme high values are closely clustered with very little variation.

ETEST Percentage (etest_p) Distribution Analysis

Q1 → Q2 (25%–50%):

SSC scores increase sharply from 61 to 66, showing that a large number of candidates move quickly from lower to average performance levels.

Q2 → Q3 (50%–75%):

Scores rise from 66 to 72, indicating a strong improvement among above-average performers and a wide spread in this range.

Q3 → 99% (75%–99%):

SSC scores grow more moderately from 72 to 83.86, suggesting fewer candidates but steady improvement among top performers.

99% → Q4 (99%–100%):

The increase is minimal from 83.86 to 91, showing that extreme high values are closely clustered with very little variation.

MBA Percentage (mba_p) Distribution Analysis

Q1 → Q2 (25%–50%):

SSC scores increase sharply from 57.9 to 62, showing that a large number of candidates move quickly from lower to average performance levels.

Q2 → Q3 (50%–75%):

Scores rise from 62 to 66.2, indicating a strong improvement among above-average performers and a wide spread in this range.

Q3 → 99% (75%–99%):

SSC scores grow more moderately from 66.2 to 76.1, suggesting fewer candidates but steady improvement among top performers.

99% → Q4 (99%–100%):

The increase is minimal from 76.1 to 77.89, showing that extreme high values are closely clustered with very little variation.
